

## FORREX AGM and Science Forum:

# Forests and natural resources in the 22<sup>nd</sup> century

What will our forested ecosystems look like in the year 2100? Will society flourish from a sustained supply of goods and services from our forested environment?

How are science, technology, and innovative practices being applied to ensure a continued supply of water and other natural resource products and services?

Entitled, "Forests and Natural Resources in the 22<sup>nd</sup> Century," this FORREX Science Forum will discuss how many of the solutions for tomorrow are being developed through research, development, and management today. With an ever-changing social and political agenda and a dynamic-by-nature environment, science and technology can be used to learn from today and predict for tomorrow.

The forum is planned for August 31–September 1, 2005 and will be held in the Grand Hall, 900 McGill Road, at Thompson Rivers University in Kamloops, British Columbia.

Day 1 of the forum will lead off with an international perspective on natural resources and their

management and will highlight the results of the XXII IUFRO World Congress being held this summer in Brisbane, Australia. Speakers include **Dr. John Innes, Rob Kozak, Rob Trosper,** and **Chris Hollstedt** with **Alex Ferguson** providing his perspective and key take-home messages.

On Day 2 a number of experts will speak about local innovative adaptations to integrated resource management challenges with a final provocative wrap-up by a panel composed of **Jane Perry, Al Gorley,** and **Michael Blackstock**. Come see and hear what your partners in natural resources innovation have been up to. 🌲
